

Icaros Desktop 2.3

The dawn of a new era?

Your wait is almost over.

Icaros Desktop, the leading AROS distribution, is now getting near to its 2.3 release, a brand new point release with a lot of enhancements over the previous ones.

This is RNOPublisher. A great tool you may use to compose PDF files you can print with PostScript printers or send to your colleagues by e-mail.

With the help of SilkRAW, you can also import and use RAW images from your digital camera.

The best AROS EVER!

There is no need to look
anywhere else!

Icaros Desktop has
everything you need for
your AROS needs. The
distribution includes
drawing applications,
photo-retouch tools,
converters and players for
almost every kind of
image, video and music
file. Icaros Desktop
includes everything you
need to create this PDF
page.

(yes! I actually created
this page on Icaros!)
